Doctor's Instructions

Fecal Intestinal Parasite Examination

A sample of your pet's stool was checked for the presence of intestinal worms. Some parasites, even with a fecal flotation, can be very difficult to detect. Even if this test is negative, if you notice evidence of worms in your pet's stool, such as small rice-like segments (indicating tapeworms) or spaghetti-like strands (indicating roundworms), please call and a doctor can recommend the appropriate medication.

Kennel Cough Vaccination, Semi-annual
